

The Security:

Entrex received a patent for a revenue-enhanced debt security in 2008 called a TIGRcub® Security (Topline Income Generation Rights Certificate). This security was created to benefit cash-flowing entrepreneurial companies with a non-dilutive debt option for their capital structure needs.

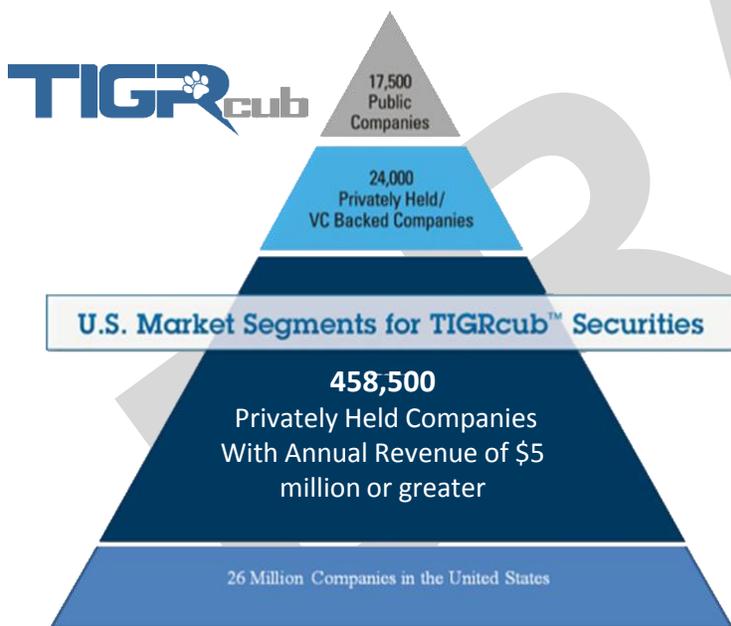

The TIGRcub® can be used for acquisitions, growth capital, refinancing loan options, or owner liquidity. With the development of [Entrex's InstaCub Calculator](#), companies can quickly confirm eligibility for a TIGRcub® Security. To determine if a TIGRcub® could assist your client, complete the InstaCub Eligibility and request a customized illustration for the company.

Entrex, Inc.:

Entrex was established in 2001, to create the leading "capital market for entrepreneurial companies." Stephen H. Watkins, Founder & CEO of Entrex, envisioned a mission to provide private, entrepreneurial companies the capital needed to expand and scale.

Through Watkins' various companies he's owned and administrated, he understood the difficulty that private companies possessed when accessing capital, thus Entrex was created as an (Entr)preneurial (Ex)change to create capital efficiency within this sector.

Today, Entrex provides capital to its constituents via their alternative yield product, the TIGRcub® Debt Security.

The Market:

Entrex and their broker community (consisting of over 9000 individuals) focus on the privately held companies in America's economy. These companies are the lifeblood of growth and prosperity and houses the largest employment sector of the market. Historically, Entrex and its TIGRcub® have an average transaction size of \$17 million while the issuing company is about 13 years since their inception. This allows Entrex and its accredited/institutional investors to allow for credible historical and projected cash flows through the term of the TIGRcub®.

The Process:

Through the incorporation of the TIGRcub®, the funding process has evolved into its current "BlockChain methodology." Entrex's eChain allows for multiple bids/offers per transaction and created an ITO (an Initial TIGRcub® Offering) which distributes certificates, similar to a public company's IPO where they would issue stocks. Contact Entrex for more details.
